8. Valuation Approach and Methodology

Basis and Methodology of Valuation

- **Valuation Base**

  Valuation Base means the indication of the type of value being used in an engagement. In the present case, we have estimated fair value of the Specified SPVs. Fair Value as per ICAI VS defined as under:

  "Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the valuation date."

- **Valuation Date**

  Valuation Date is the specific date at which the value of the assets to be valued gets estimated or measured. Valuation is time specific and can change with the passage of time *inter-alia* due to changes in the condition of the asset to be valued and market parameters. Accordingly, valuation of an asset as at a particular date can be different from other date(s).

  The Valuation Date considered for the fair valuation of the Specified SPVs is 30th September 2021 ("Valuation Date"). The attached Report is drawn up by reference to accounting and financial information as on 30th September 2021.

- **Premise of Value**

Premise of Value refers to the conditions and circumstances how an asset is deployed. In the present case, we have determined the fair enterprise value of the Specified SPVs on a Going Concern Value defined as under:

"Going concern value is the value of a business enterprise that is expected to continue to operate in the future. The intangible elements of going concern value result from factors such as having a trained work force, an operational plant, the necessary licenses, systems, and procedures in place, etc".

Approach & Method	Applied	Description	Rationale
Income Approach → Discounted Cash Flow Method (DCF)	✓	▪ In the DCF method under the Income approach, forecast cash flows are discounted back to the Valuation date, estimating a net present value of the cash flow stream of the business. A terminal value at the end of the explicit forecast period is then determined and that value is also discounted back to the Valuation date to give an overall value for the business. ▪ A discounted cash flow methodology typically requires the forecast period to be of such a length to enable the business to achieve a stabilized level of earnings, or to be reflective of an entire operation cycle for more cyclical industries. ▪ The rate at which the future cash flows are discounted (the "discount rate") should reflect not only the time value of money, but also the risk associated with the business' future operations. The discount rate most generally employed is Weighted Average Cost of Capital ("WACC") or Cost of Equity (Ke), reflecting an optimal as opposed to actual financing structure.	• Management has provided financial projections of the Specified SPVs for the balance tenor of the TSA. Hence, we have adopted the DCF method to estimate the value of the Specified SPVs.
Market Approach → Market Price Method	✗	▪ Under this method, the value of a company is arrived at considering its market price over an appropriate period.	▪ As the Specified SPVs are not listed, this method is not applied.

Approach & Method	Applied	Description	Rationale
Market Approach → Comparable Companies Multiples (CCM) Method	✘	▪ Under Comparable Companies Method, the value of shares / business of a company is determined based on market multiples of publicly traded comparable companies. Although no two companies are entirely alike, the companies selected as comparable companies should be engaged in the same or a similar line of business as the subject Company. ▪ The appropriate multiple is generally based on the performance of listed companies with similar business models and size.	▪ There are limited listed entities which operates in the Transmission industry. The Specified SPVs are operational and do not have project implementation risk. Further, the projected income and cash flows of the Specified SPVs primarily depend on the key terms of the respective TSAs, residual tenor, project-specific characteristics/ factors, etc. which may differ from the other projects. Accordingly, this method is not adopted.
Market Approach → Comparable Transaction Multiples (CTM) Method	✘	▪ Under Comparable Transaction Multiples Method, the value of shares /business of a Company is determined based on market multiples of publicly disclosed transactions in the similar space as that of the subject Company. ▪ Multiples are generally based on data from recent transactions in a comparable sector, but with appropriate adjustment after consideration is given to the specific characteristics of the business being valued.	▪ The projected income and cash flows of the Specified SPVs primarily depend on the key terms of the respective TSAs, residual tenor, project-specific characteristics/ factors, etc. which may differ from the other projects. We have not adopted this methodology due to unavailability of information in public domain involving recent transactions in similar projects.
Asset based Approach: → Adjusted Net Asset Value Method	✘	▪ Under the Adjusted Net Asset Value Method, a Valuation of a 'going concern' business is computed by adjusting the assets and liabilities to the fair market value as of the date of the Valuation.	▪ The Specified SPVs have entered into TSA and their revenues are largely predetermined for the residual period of the TSA. In such a

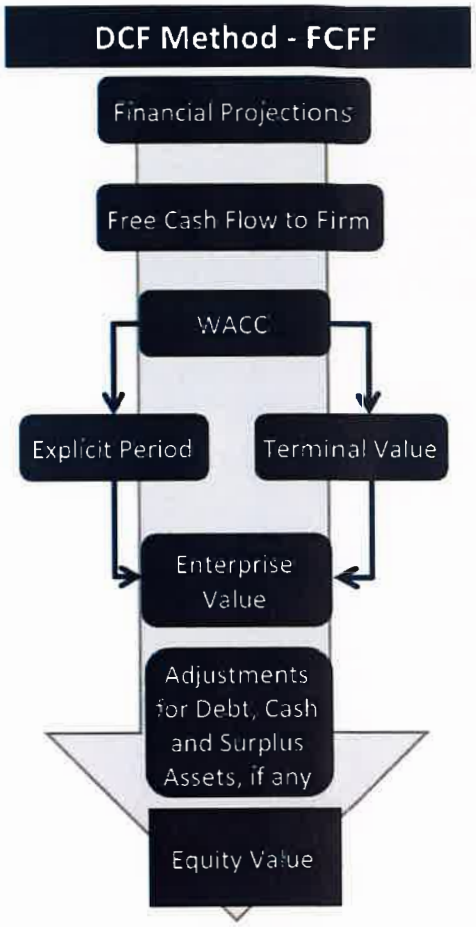

Approach & Method	Applied	Description	Rationale
		▪ A net asset value methodology is typically most appropriate when: ▪ Valuing a holding Company or a capital-intensive Company. ▪ Losses are continually generated by the business; or ▪ Valuation methodologies based on a Company's net income or cash flow levels indicate a value lower than its adjusted net asset value.	scenario, the true worth of the business is reflected in its future earning capacity rather than the historical cost of the project. The valuation of the Specified SPVs is carried out on a 'going concern' premise. Since the Net Asset value does not capture the future earning potential of the businesses, we have not adopted the Asset approach for the valuation of the Specified SPVs.

Income Approach

The Income Approach is widely used for valuation under "Going Concern" basis. It focuses on the income generated by a company in the past as well as its future earning capability.

Discounted Cash Flow ("DCF") Method

- Under the DCF method, the business is valued by discounting its free cash flows for the explicit forecast period and the perpetuity value thereafter. The free cash flows represent the cash available for distribution to both, the owners and creditors of the business. The free cash flows in the explicit period and those in perpetuity are discounted by the Weighted Average Cost of Capital ("WACC"). The WACC is an appropriate rate of discount to calculate the present value of the future cash flows as it considers equity–debt risk by incorporating debt–equity ratio of the firm.
- The perpetuity (terminal) value is calculated based on the business' potential for further growth beyond the explicit forecast period. The "constant growth or the exit multiple method" is applied to arrive at the present value of terminal value.
- Enterprise Value ("EV") is derived by aggregating the present value of explicit period and terminal value. EV is further reduced by the value of debt, if any, (net of cash and cash equivalents), adding surplus assets and considering other adjustments as appropriate to arrive at equity value to the equity shareholders.
- Free Cash Flows to Firm ("FCFF") under the DCF method has been applied to value the equity shares of the Specified SPVs.
- In FCFF, free cash flows available to a SPV over the forecast period are discounted by an appropriate WACC to derive the net present value.
- The Enterprise Value of the Specified SPVs have been determined as an aggregate of the present value of cashflows over explicit period and terminal value.
- The Enterprise Value of the Specified SPVs have been adjusted *inter-alia* for the following as at the Valuation Date to arrive at the Equity value:
  - Debt Outstanding
  - Cash and Cash Equivalent
  - Fair value of Contingent Assets and Liabilities, if any.

The Enterprise Value and Equity Value of the Specified SPVs have been estimated using the DCF method under the Income Approach by taking into account the following considerations:

- We have considered and relied on the Management Projections provided by the Investment Manager for estimating the Enterprise and Equity Value.
- The forecast period in case of the Specified SPVs is based on the residual term of the respective TSAs as of the Valuation Date.
- We understand from the Management that the ownership of the project assets shall remain with the Specified SPVs after completion of the term of the TSA and that the project assets will continue to have economic utility beyond the term of the TSA. Considering the aforementioned, terminal Value at the end of the forecast period has been estimated based on the projected annualized revenue and EBITDA margins in the last forecast year and assuming a long-term growth rate of 0% and maintainable capital expenditure equal to the annual depreciation during the forecast period.
- Free Cash flow in forecast period and terminal value have been discounted using the appropriate weighted average cost of capital (WACC)

Weighted Average Cost of Capital (WACC)

In order to determine the discount rate for estimating the present value of free cash flows, we have computed the WACC using the methodology as set out below:

Particulars	Definition/Formula
WACC	Ke * (E/(D + E)) + Kd * (1-T) * (D/(D + E))
Where:	
Ke	cost of equity
E	market value of equity
Kd	cost of debt
D	market value of debt
T	Effective tax rate

The cost of equity is derived using the Capital Asset Pricing Model ("CAPM") as follows:

Particulars	Definition/Formula
Ke	Rf + ß * (Rm – Rf) + α
Where:	
Rf	the current return on risk-free assets
Rm	the expected average return of the market
(Rm – Rf)	the average risk premium above the risk – free rate that a "market" portfolio of assets is earning
ß	the beta factor, being the measure of the systematic risk of a particular asset relative to the risk of a portfolio of all risky assets
α	Company specific risk factor (alpha)

A summary of WACC for the Specified SPVs is appended as per **Appendix 1**.

9.1.2. Projected Financial Statements

The projected financial statements for the forecast period until 31st January 2052, when 35 years from the COD end, have been provided by the Investment Manager for the valuation. Key assumptions considered by the Management in financial projections are as follows:

1. **Transmission Revenue** – Transmission revenue of PVTL is provided in the TSA for the life of the project. It comprises non-escalable transmission revenue and escalable transmission revenue as follows:

   a. **Non-Escalable Transmission Revenue** – It remains fixed for the entire life of the project. We have corroborated the non-escalable transmission revenue provided by the Management in the financial projections with the TSA of PVTL.

   b. **Escalable Transmission Revenue** – It is the revenue component where revenue is escalated each year based on the escalation index which is computed as per the annualised escalation rate notified by the CERC every 6 months. This escalation is done mainly to compensate PVTL for inflation. Management Projections considers a constant escalation rate of 4.40% for the forecast period based on the past 5-year rates as notified by the CERC.

2. **Incentive** – As per the TSA, if the availability in a contract year exceeds the target availability of 98%, PVTL shall be entitled to an annual incentive as follows:

   Incentive = 0.02 X Annual Transmission Charges X (Actual Annual Availability - Target Availability)

   No incentive shall be payable above the availability of 99.75%. Management expects the annual availability for PVTL at or above 99.75% during the forecast period.

3. **Penalty** – If the availability in any contract year falls below 95%, PVTL shall be penalised as per the TSA. As represented to us by the Management, the availability in any contract year shall not fall below 95% during the forecast period and thus the penalty has not been considered in the financial projections.

14. **Depreciation** – Effective from 1st April 2020, depreciation is being calculated using Straight Line Method over the life of the project considering a salvage value of 5% as per the Companies Act, 2013. For calculating depreciation as per Income Tax Act for the projected period, depreciation rate as specified in the Income Tax Act and WDV as per Income Tax Return filed by PVTL have been considered. PVTL is expected to incur certain maintenance capital expenditure during the forecast period. The effect of the same has been considered while computing both book and income tax depreciation.

The outbreak of the Novel Coronavirus ("COVID-19"), declared by the World Health Organization as a "Global Pandemic" on 11th March 2020 and second wave of the same in April 2021, has adversely affected the Global and Indian economy. Travel restrictions implemented by many countries has affected the economic activities. Governments have announced various measures to combat COVID 19 pandemic and to support the economic and business activities. Though economic recovery is being witnessed in India coupled with the Government's vaccination efforts and fall in covid cases, the possibility of the third wave is not ruled out. There are still significantly higher uncertainties in the near to medium term. Considering the unprecedented set of circumstances, Value analysis is reported on the basis of 'material valuation uncertainty' and accordingly less certainty and a higher degree of caution should be attached to the Value Analysis than would normally be the case. It may be noted that the estimated value may change significantly and unexpectedly over a relatively short period of time based on the evolving conditions/ uncertainties on account of COVID 19 pandemic.

We understand from the Management that future cash outflow, if any, on account of contingent liabilities shall be borne by POWERGRID. Hence, the impact of the contingent liabilities has not been considered in the estimation of the Enterprise Value and Equity Value. However, for disclosure purposes, the contingent liabilities of the Specified SPVs are as follows:

   iii. Other Contingent liability related to arbitration/RoW cases – INR 88.61 Mn.

c. **PWTL**
   i. Building permission fees, penalty on diversion of agriculture land to non-agriculture use, Nala tax, water royalty etc – INR 3.31 Mn
   ii. Other Contingent Liabilities related to arbitration cases – INR 0.9 Mn.

d. **PJTL**
   i. Liquidated damages – INR 60.86 Mn

Further, we understand from the Management that:

- the contingent assets pertaining to the incremental revenue expected to be received in case of PJTL due to the change in law shall be passed on to POWERGRID.
- This inflow of revenue shall either not be taxable in the hands of PJTL or shall be passed on net of taxes to POWERGRID.

Hence, the impact of the same is not considered for the valuation.
